

Logistics and Supply Chain Management System:

1. System Overview

The Logistics and Supply Chain Management System (LSCMS) will facilitate the management of inventory, suppliers, and order fulfillment, ensuring smooth and efficient operations in the supply chain. This system will integrate tracking, warehouse management, shipment scheduling, and reporting, with a focus on minimizing delays and improving the overall supply chain performance.

2. Entities and Attributes

- **Supplier**
 - Attributes: supplierId, supplierName, contactDetails, contract, rating, paymentTerms
- **Product**
 - Attributes: productId, productName, description, unitPrice, stockQuantity, supplier, reorderLevel
- **Warehouse**
 - Attributes: warehouseId, location, capacity, availableSpace
- **Inventory**
 - Attributes: inventoryId, product, warehouse, quantityAvailable, lastUpdated, reorderPoint
- **Shipment**
 - Attributes: shipmentId, order, shipmentStatus, expectedDeliveryDate, route, vehicle, driver
- **PurchaseOrder**
 - Attributes: purchaseOrderId, product, supplier, orderDate, deliveryDate, status, quantity, totalCost
- **SalesOrder**
 - Attributes: salesOrderId, customer, orderDate, shippingAddress, status, productList, totalAmount
- **Customer**
 - Attributes: customerId, customerName, contactDetails, address, orderHistory
- **DeliveryVehicle**
 - Attributes: vehicleId, vehicleType, capacity, licensePlate, currentLocation
- **Driver**
 - Attributes: driverId, driverName, licenseNumber, contactDetails, assignedVehicle
- **Invoice**
 - Attributes: invoiceId, order, invoiceDate, totalAmount, paymentStatus, dueDate
- **Payment**
 - Attributes: paymentId, paymentDate, paymentMode, invoice, amountPaid, status
- **Contract**
 - Attributes: contractId, supplier, startDate, endDate, terms, contractValue

- **Route**
 - Attributes: routeId, startLocation, endLocation, distance, estimatedTime
- **Feedback**
 - Attributes: feedbackId, customer, order, rating, comments

3. Modules and Functionalities

3.1 Inventory Management

- **Track Stock Levels:** Monitor product availability in different warehouses.
- **Reorder Points:** Automatically trigger notifications for products that are below reorder levels.
- **Product Availability:** Check availability across multiple locations.
- **Stock Transfer:** Manage stock transfers between different warehouses.

3.2 Supplier Management

- **Supplier Contracts:** Manage contract details like terms, start/end dates, and contract value.
- **Supplier Performance:** Track supplier reliability through order history and feedback.
- **Order Management:** Place and track purchase orders to suppliers, manage reorders, and check supplier availability.

3.3 Order Fulfillment

- **Sales Order Management:** Handle customer orders from creation to delivery.
- **Purchase Order Management:** Track the status of orders placed with suppliers.
- **Order Tracking:** Track the status of sales and purchase orders, including shipping and delivery updates.

3.4 Shipment Tracking

- **Route Management:** Manage shipping routes, optimize delivery routes, and calculate estimated delivery times.
- **Vehicle Assignments:** Assign delivery vehicles and drivers to specific shipments.
- **Delivery Tracking:** Track shipments in real time to ensure timely delivery.

3.5 Warehouse Management

- **Product Locations:** Track where products are stored in each warehouse.
- **Warehouse Transfers:** Manage stock transfers between warehouses for better product distribution.
- **Capacity Management:** Monitor available space and adjust inventory accordingly.

3.6 Payment Module

- **Invoice Generation:** Generate invoices for customer sales orders and supplier purchase orders.
- **Payment Tracking:** Track payment status for both suppliers and customers.
- **Payment Reminders:** Send automated reminders for due payments.

3.7 Analytics and Reporting

- **Logistics Performance:** Provide reports on delivery times, vehicle usage, and supplier performance.
- **Inventory Levels:** Analyze product availability and predict shortages or excess stock.

- **Supplier Reliability:** Generate reports on supplier performance based on on-time deliveries and product quality.
- **Order Insights:** Track fulfillment times and customer satisfaction with order handling.

4. Non-Functional Requirements

- **Scalability:** The system should handle a growing number of products, orders, and shipments as the business expands.
- **Performance:** Efficient processing of inventory updates, real-time tracking of orders, and optimized report generation.
- **Security:** Data privacy and security measures to protect supplier, customer, and financial information.
- **Usability:** A user-friendly interface for warehouse managers, suppliers, and customers.

5. Tools and Technologies

- **Core Java:** For business logic, collections handling, and application flow.
- **Hibernate (ORM):** For database interactions, mapping entities to relational tables, and simplifying CRUD operations.
- **MySQL/PostgreSQL:** Relational database for storing entities like Suppliers, Products, Orders, etc.
- **Collections Framework:** For managing lists of entities like Products, Orders, Shipments, etc.

6. Conclusion

The Logistics and Supply Chain Management System will streamline logistics operations, improve supplier coordination, and enhance order fulfillment efficiency.

Modules description

1. Inventory Management Module

Description: The Inventory Management module manages stock levels of products stored in different warehouses. It handles operations such as tracking inventory levels, managing reorder points, and monitoring stock movements between warehouses.

Key Features:

- **Product Tracking:** Allows tracking of the current stock level of products in different warehouses.
- **Stock Movements:** Facilitates stock transfers between warehouses, keeping records of transfers and adjustments.
- **Reorder Management:** Automatically generates alerts when a product's stock level goes below its reorder point.
- **Inventory Audits:** Supports inventory audits by comparing physical stock with system records.

Entities:

- Product, Warehouse, Inventory

Key Operations:

- Add/Edit/Delete product stock.
 - Transfer products between warehouses.
 - Track and view stock levels.
 - Set reorder points and generate alerts.
-

2. Supplier Management Module

Description: The Supplier Management module helps manage supplier relationships, including handling supplier details, performance tracking, and managing contracts with suppliers. This module also allows users to track orders placed with suppliers.

Key Features:

- **Supplier Records:** Create and manage supplier profiles with contact information and contract details.
- **Performance Evaluation:** Track supplier performance using metrics like delivery times and reliability.
- **Contract Management:** Manage supplier contracts, including tracking start and end dates, terms, and renewal.
- **Purchase Order Creation:** Generate and manage purchase orders sent to suppliers.

Entities:

- Supplier, Contract, PurchaseOrder

Key Operations:

- Add/Edit/Delete supplier details.
- Manage contracts with suppliers.
- Create and track purchase orders.
- Rate suppliers based on order fulfillment and performance.

3. Order Fulfillment Module

Description: The Order Fulfillment module handles the processing of both sales orders (from customers) and purchase orders (to suppliers). This includes the entire lifecycle from order creation to delivery, handling payments, and managing related invoices.

Key Features:

- **Sales Order Management:** Create, track, and update sales orders.
- **Purchase Order Management:** Manage orders placed with suppliers, including tracking delivery status.
- **Order Status Tracking:** Monitor the status of orders (e.g., Pending, Completed, Cancelled).
- **Invoicing:** Generate invoices for both customers and suppliers.
- **Payment Tracking:** Track payments for sales and purchase orders.

Entities:

- SalesOrder, PurchaseOrder, Invoice, Payment

Key Operations:

- Create/Edit/Delete sales and purchase orders.
- Generate invoices and track payments.
- Update order status as it progresses through the fulfillment process.

4. Shipment Tracking Module

Description: The Shipment Tracking module oversees the management of shipments for both sales and purchase orders. It tracks shipment routes, vehicle assignments, and delivery status.

Key Features:

- **Route Management:** Plan and manage delivery routes.
- **Vehicle Assignment:** Assign delivery vehicles and drivers to shipments.
- **Shipment Status:** Track shipment status from warehouse dispatch to customer delivery.
- **Delivery Confirmation:** Confirm the successful delivery of products to customers.

Entities:

- Shipment, DeliveryVehicle, Driver, Route

Key Operations:

- Plan and manage shipment routes.
- Assign vehicles and drivers to shipments.
- Update shipment status (e.g., In Transit, Delivered).
- Confirm delivery and update order status accordingly.

5. Warehouse Management Module

Description: The Warehouse Management module provides tools for managing product storage within warehouses, including tracking product locations, managing warehouse capacity, and handling stock transfers between warehouses.

Key Features:

- **Warehouse Overview:** Manage details of different warehouses, such as location, capacity, and available space.
- **Stock Locations:** Track where products are stored within each warehouse.
- **Capacity Planning:** Monitor available space and optimize storage capacity.
- **Stock Transfers:** Manage transfers of products between different warehouses.

Entities:

- Warehouse, Inventory

Key Operations:

- Add/Edit/Delete warehouse details.
 - View and manage product locations within warehouses.
 - Transfer stock between warehouses.
 - Track warehouse capacity and availability.
-

6. Payment Module

Description: The Payment Module manages all financial transactions related to sales orders and purchase orders. It handles invoicing, tracks payments, and manages various payment methods.

Key Features:

- **Invoice Generation:** Automatically generate invoices for sales and purchase orders.
- **Payment Tracking:** Track payments received from customers and payments made to suppliers.
- **Payment Modes:** Support multiple payment methods such as credit card, bank transfer, cash, and cheque.
- **Payment Status Monitoring:** Track payment statuses (e.g., Paid, Pending, Overdue).

Entities:

- Invoice, Payment

Key Operations:

- Generate invoices for orders.
 - Record and track payments for sales and purchase orders.
 - Update and view payment status.
 - Support partial payments or multiple payments for the same order.
-

7. Analytics and Reporting Module

Description: The Analytics and Reporting module provides insights into the logistics and supply chain operations. It generates reports on key performance indicators (KPIs) such as inventory turnover, supplier reliability, delivery times, and overall efficiency.

Key Features:

- **Inventory Reports:** Analyze inventory levels, stock movements, and reorder points.
- **Supplier Performance Reports:** Monitor supplier performance based on delivery reliability and product quality.
- **Order Fulfillment Reports:** Track the status of sales and purchase orders and analyze delivery times.
- **Financial Reports:** Generate reports on invoicing, payments, and outstanding balances.
- **Custom Reports:** Create custom reports based on specific business needs.

Entities:

- Utilizes data from various entities like Inventory, SalesOrder, PurchaseOrder, Payment, Supplier

Key Operations:

- Generate stock level and inventory reports.
- Monitor supplier performance through KPIs.
- Track sales and purchase order fulfillment metrics.
- Generate financial reports on invoices and payments.
- Customize reports with filtering and grouping features.

Module Interactions:

1. **Inventory Management** interacts with the **Warehouse Management** and **Order Fulfillment** modules to maintain up-to-date stock levels and availability.
2. **Supplier Management** works with the **Order Fulfillment** and **Payment** modules to ensure efficient handling of supplier contracts, orders, and payments.
3. **Shipment Tracking** integrates closely with the **Order Fulfillment** module to ensure that deliveries are managed and tracked properly.
4. **Analytics and Reporting** pulls data from all modules to provide insights and performance metrics, helping with strategic decision-making.

This modular design allows for scalability and flexibility, enabling future extensions like the integration of third-party logistics providers, advanced reporting features, and integration with external payment gateways.

Detailed workflow

1. Supplier and Product Setup Workflow

Workflow:

1. Supplier Registration:

- The admin or procurement team adds a new Supplier by entering supplier details such as name, contact info, and agreement terms.
- A Contract is created and associated with the supplier.

2. Product Registration:

- The procurement team adds new Products provided by suppliers.
- Each product is linked to one or more suppliers and associated with initial inventory information.

3. Inventory Setup:

- Products are assigned to specific Warehouses via the Inventory table, where stock levels and reorder points are set.

Entities Involved:

- Supplier, Contract, Product, Inventory, Warehouse
-

2. Purchase Order Creation Workflow

Workflow:

1. Create Purchase Order:

- When stock levels for products fall below the reorder point, a new PurchaseOrder is created.
- The procurement team selects a Supplier, products, and the quantity required.

2. Send Purchase Order:

- The system sends the PurchaseOrder to the supplier either automatically (via email or a dashboard) or manually.

3. Order Tracking:

- The purchase order's status (Pending, Approved, Delivered) is updated as the supplier processes and ships the order.

Entities Involved:

- Supplier, PurchaseOrder, Product, Inventory
-

3. Sales Order Processing Workflow

Workflow:

1. Customer Places Order:

- A Customer browses available Products and places a SalesOrder through the system.

- The system verifies stock availability in the Inventory.

2. **Generate Sales Order:**

- The SalesOrder is created, and payment terms are recorded (prepaid or postpaid).
- The system generates an initial Invoice for the customer.

3. **Allocate Stock:**

- The system reserves the required stock from the Inventory in the warehouse.
- If stock is insufficient, the system triggers a replenishment request (new purchase order).

Entities Involved:

- Customer, SalesOrder, Product, Inventory, Invoice
-

4. **Warehouse and Inventory Management Workflow**

Workflow:

1. **Warehouse Overview:**

- The warehouse manager oversees product storage and stock levels across multiple warehouses using the system.

2. **Stock Transfer:**

- If stock is low in a specific Warehouse, the system triggers a stock transfer from another warehouse.

3. **Inventory Updates:**

- When products are received (from a supplier or as a stock transfer), the system updates Inventory levels in the appropriate warehouse.

4. **Inventory Audits:**

- Regular audits are conducted, and any discrepancies are logged and adjusted.

Entities Involved:

- Warehouse, Inventory, Product
-

5. **Shipment Management Workflow**

Workflow:

1. **Assign Shipment:**

- Once a SalesOrder is processed, the system generates a Shipment.
- The logistics team assigns a DeliveryVehicle and Driver to the shipment.

2. **Route Planning:**

- The system plans an optimal Route for delivery, considering factors such as delivery location, distance, and vehicle capacity.

3. **Track Shipment:**

- The system tracks the Shipment in real-time, updating its status (In Transit, Delivered) based on inputs from the driver or tracking systems.

4. **Delivery Confirmation:**

- Upon delivery, the driver or system confirms delivery, updating the shipment status and marking the sales order as fulfilled.

Entities Involved:

- SalesOrder, Shipment, DeliveryVehicle, Driver, Route
-

6. Payment Processing Workflow

Workflow:

1. **Invoice Generation:**

- Once a SalesOrder is processed, an Invoice is automatically generated.
- The system calculates the total amount based on the products, applicable taxes, and any discounts.

2. **Receive Payment:**

- The customer makes a payment via their preferred payment method (e.g., bank transfer, credit card, cash).
- The Payment entity records the details of the payment, linking it to the Invoice and SalesOrder.

3. **Payment Status Update:**

- The system updates the payment status (Paid, Pending, Overdue) based on the payment received.
- For overdue invoices, the system sends reminders to customers.

4. **Supplier Payment:**

- After a PurchaseOrder is fulfilled by the supplier, the system generates an invoice for the supplier.
- Payment is made to the supplier, and the system updates the supplier's payment status.

Entities Involved:

- Invoice, Payment, SalesOrder, PurchaseOrder, Supplier
-

7. Feedback and Performance Tracking Workflow

Workflow:

1. **Customer Feedback:**

- After the successful delivery of an order, customers can provide Feedback on the product quality and service.
- The system stores this feedback for later analysis.

2. **Supplier Performance:**

- The system tracks Supplier performance based on delivery times, quality of products, and other metrics.
- Poor-performing suppliers can be flagged for review or contract renegotiation.

3. **Driver Feedback:**

- Customers or managers can provide feedback on Driver performance, which is stored for future evaluations.

Entities Involved:

- SalesOrder, Customer, Supplier, Feedback, Driver
-

8. Analytics and Reporting Workflow

Workflow:

1. **Inventory Reports:**

- Warehouse managers generate reports on current stock levels, reorder points, and stock movements across warehouses.

2. **Sales and Purchase Reports:**

- The system provides detailed reports on sales and purchase orders, highlighting fulfillment rates, delivery times, and trends over time.

3. **Supplier Performance Reports:**

- The system tracks supplier performance metrics, including delivery times, order accuracy, and overall reliability.

4. **Financial Reports:**

- The system generates financial reports detailing invoicing, payments, outstanding balances, and profit/loss.

5. **Custom Reports:**

- Users can create custom reports by selecting specific data points or timeframes to analyze business performance.

Entities Involved:

- Inventory, SalesOrder, PurchaseOrder, Supplier, Payment, Invoice
-

9. End-to-End Order Fulfillment Workflow

Workflow:

1. **Customer Places Order:**

- A customer places an order for one or more products through the system.

2. **Check Inventory:**

- The system checks the inventory to confirm product availability.

3. **Process Sales Order:**

- The system generates a SalesOrder, assigns stock from the warehouse, and generates an Invoice.

4. **Plan Shipment:**

- The logistics team plans a shipment by assigning a vehicle, driver, and delivery route.

5. **Shipment and Delivery:**

- The order is shipped and tracked in real-time. Upon successful delivery, the shipment status is updated.

6. **Payment and Confirmation:**

- The customer makes a payment, and the system updates the payment status.

7. **Order Closure:**

- The sales order is marked as complete, and the customer receives a final confirmation of order fulfillment.

Entities Involved:

- Customer, SalesOrder, Inventory, Shipment, DeliveryVehicle, Driver, Route, Invoice, Payment
-

Summary of Module Interactions:

- **Supplier Management** interacts with **Purchase Orders** and **Inventory** to ensure products are available for order fulfillment.
- **Sales Orders** trigger the **Shipment** process, which interacts with **Warehouse Management** to release products.
- **Payment Module** handles the financial side of sales and purchase orders, working closely with **Invoice** and **Customer Feedback**.
- **Analytics and Reporting** pulls data from all modules to generate insights into business performance.

This workflow ensures that all components of the logistics and supply chain process are integrated and handled efficiently.
