

Online Auction System

Requirement Analysis:-

Project Description:

The **Online Auction System** is designed to allow users to auction off items and bid in real-time. Users can list items, participate in auctions, place bids, and track their activities. The system will include features for managing user accounts, processing payments, handling auction items, and generating reports.

Entities and Attributes:

1. User:

- user_id: Integer (Primary Key)
- username: String
- password: String
- email: String
- phone: String
- address: String
- role: UserRole (Foreign Key)
- watchlist: List of Watchlist (Bidirectional relationship)
- feedback: List of Feedback (One-to-Many)

2. AuctionItem:

- item_id: Integer (Primary Key)
- name: String
- description: String
- starting_price: Double
- current_price: Double
- start_time: DateTime
- end_time: DateTime
- category: Category (Foreign Key)
- auction_house: AuctionHouse (Foreign Key)
- bids: List of Bid (One-to-Many)
- status: Enum (Active/Closed)
- owner: User (Foreign Key, One-to-One)

3. Bid:

- bid_id: Integer (Primary Key)
- bid_amount: Double

- bid_time: DateTime
- user: User (Foreign Key)
- auction_item: AuctionItem (Foreign Key)
- status: Enum (Accepted/Rejected)

4. Category:

- category_id: Integer (Primary Key)
- name: String
- description: String
- auction_items: List of AuctionItem (One-to-Many)

5. Payment:

- payment_id: Integer (Primary Key)
- amount: Double
- payment_date: DateTime
- payment_method: Enum (CreditCard, PayPal, etc.)
- user: User (Foreign Key)
- invoice: Invoice (One-to-One)

6. Invoice:

- invoice_id: Integer (Primary Key)
- amount: Double
- date: DateTime
- auction_item: AuctionItem (Foreign Key)
- user: User (Foreign Key)
- payment: Payment (Foreign Key)

7. Feedback:

- feedback_id: Integer (Primary Key)
- rating: Integer
- comments: String
- user: User (Foreign Key)
- auction_item: AuctionItem (Foreign Key)

8. Notification:

- notification_id: Integer (Primary Key)
- message: String
- date: DateTime
- user: User (Foreign Key)

9. **AuctionHouse:**

- auction_house_id: Integer (Primary Key)
- name: String
- location: String
- auction_items: List of AuctionItem (One-to-Many)

10. **Comment:**

- comment_id: Integer (Primary Key)
- content: String
- user: User (Foreign Key)
- auction_item: AuctionItem (Foreign Key)
- timestamp: DateTime

11. **UserRole:**

- role_id: Integer (Primary Key)
- role_name: String
- users: List of User (One-to-Many)

12. **Watchlist:**

- watchlist_id: Integer (Primary Key)
- user: User (Foreign Key)
- auction_items: List of AuctionItem (Many-to-Many)

13. **Transaction:**

- transaction_id: Integer (Primary Key)
- transaction_date: DateTime
- user: User (Foreign Key)
- auction_item: AuctionItem (Foreign Key)
- amount: Double

14. **Delivery:**

- delivery_id: Integer (Primary Key)
- address: String
- user: User (Foreign Key)
- auction_item: AuctionItem (Foreign Key)
- delivery_status: Enum (Shipped/Delivered)

15. **Review:**

- review_id: Integer (Primary Key)
- review_text: String

- user: User (Foreign Key)
 - auction_item: AuctionItem (Foreign Key)
 - rating: Integer
-

Modules and Descriptions:

1. Auction Management:

- Vendors can create, manage, and schedule auctions.
- Items can be assigned categories, starting prices, and time durations.
- Auction items can be updated, extended, or canceled if necessary.
- Status tracking (active/closed) for each auction.

2. Bidding System:

- Users place bids on auction items in real-time.
- The system tracks bid increments, highest bids, and closing times.
- Auctions close automatically once the end time is reached, and the highest bidder wins.
- Notifications for bids and winning/losing updates.

3. Payment Gateway:

- Integration of secure payment options (credit card, PayPal).
- Users can pay for won auctions and receive an invoice.
- Refund processing for canceled orders or returned items.
- Transactions are securely stored and accessible for both admin and users.

4. Notification System:

- Alerts are sent for bids, auctions won or lost, and upcoming auctions.
- Real-time updates are provided on the bidding process and auction results.

5. User Profile and Feedback:

- Users can create and manage profiles, including contact information and payment methods.
- Feedback and rating system for items and sellers.
- Sellers can view the performance of their items through reviews.

6. Watchlist:

- Users can add items to their watchlist for easy tracking.
- Notifications are sent for important updates on watched items, such as new bids or auction closures.

7. Reporting Module:

- Admins and vendors can generate reports based on auction performance.
- User participation, total bids, and sales are tracked and displayed visually.
- Financial tracking of all transactions, including total sales and fees collected.

Workflows:

1. Auction Creation Workflow:

- **Vendor** logs in and navigates to the "Create Auction" page.
- Vendor fills in details like item name, starting price, category, description, and auction duration.
- The system stores the auction data in the database and marks the auction as "Active."
- The auction is listed for users to view and bid on.

2. Bidding Workflow:

- **User** logs in and selects an auction item to bid on.
- User enters the bid amount and confirms the bid.
- The system checks if the bid is higher than the current highest bid.
- If valid, the system stores the bid and notifies the previous highest bidder.
- When the auction ends, the highest bidder is marked as the winner.

3. Payment and Invoice Workflow:

- **Winning bidder** receives a notification with a link to pay.
- The user selects a payment method and processes the payment through the secure gateway.
- The system generates an invoice and sends it to the user.
- The invoice is stored in the database and linked to the user's profile.

4. Delivery Workflow:

- After payment, the auction item is marked as "Ready for Delivery."
- The vendor arranges shipment and updates the delivery status.
- The system notifies the user when the item is shipped and provides tracking details.
- Once the item is delivered, the system updates the status to "Delivered."

5. Feedback Workflow:

- After receiving the item, the user can submit feedback on the auction experience.
- The system stores the feedback and rating, which is visible on the auction item's page.
- Vendors can view feedback to improve their services.

Detailed module description

1. Auction Management Module

This module handles the creation, scheduling, and management of auction events and items.

- **Features:**

- Auction creation: Admins or Auction Houses can create auctions with details like start date, end date, item listings, and bidding rules.
- Auction Item Management: Manage the auction items, including adding, editing, and removing items before the auction starts.
- Schedule Auctions: Set auction timelines and manage upcoming, ongoing, and completed auctions.
- Set bidding rules: Define the minimum starting price, bid increments, and reserve price.
- Status updates: Change the status of auctions (active, closed, canceled).
- Auction types: Support different auction types (English auction, Dutch auction, etc.).

- **User Interactions:**

- Auction Houses or Admins create auctions, and users participate by bidding on items.
-

2. Bidding System Module

The core of the system that allows users to place bids on auction items and track real-time bidding activity.

- **Features:**

- Real-time bidding: Users can place bids on live auction items, and bids are processed instantly.
- Bid history: View the complete bid history for each auction item, showing user details and bid amounts.
- Auto-bidding: Implement auto-bidding where users can set a maximum bid, and the system automatically bids on their behalf.
- Bid increments: Enforce minimum bid increments to ensure valid bidding.
- Auction closure: Automatically close auctions when time expires, selecting the highest bidder as the winner.
- Bid notifications: Notify users of higher bids, outbids, and winning notifications.

- **User Interactions:**

- Users can place, track, and adjust their bids during live auctions.
-

3. Payment Gateway Module

This module handles the financial transactions of the auction system, ensuring secure payment processing and refund handling.

- **Features:**

- Payment processing: Secure payment transactions for successful bids using various payment methods (credit card, bank transfer, etc.).

- Invoicing: Automatically generate and send invoices to winning bidders once the auction is closed.
 - Refund management: Handle refunds in cases of auction cancellations, user withdrawals, or rejected bids.
 - Payment status tracking: Track payments and send payment confirmations to users.
 - Security: Ensure the encryption and security of payment information through integration with third-party payment providers.
 - **User Interactions:**
 - Winning users make payments for their auctioned items. They can view invoices, process payments, and request refunds if necessary.
-

4. Notification System Module

The notification system ensures users receive timely updates about their bidding activity, auction statuses, and account updates.

- **Features:**
 - Bid alerts: Notify users when they are outbid or if they are the highest bidder.
 - Auction notifications: Inform users about upcoming auctions, auctions they are participating in, and auction results (won/lost).
 - Payment reminders: Remind users to make payments for won auctions.
 - System alerts: Send system-generated alerts for account activity (e.g., login attempts, password changes).
 - Configurable settings: Users can customize their notification preferences (email, SMS, push notifications).
 - **User Interactions:**
 - Users receive alerts and reminders related to their auction participation and account activity.
-

5. User Profile and Feedback Module

This module manages user accounts and allows users to view and manage their auction history, feedback, and ratings.

- **Features:**
 - User registration and login: Allow users to create accounts, log in, and manage their profiles.
 - Feedback system: Users can leave feedback and ratings for sellers and items after auctions close.
 - Auction history: View past participation in auctions, including bid history, items won, and payments made.
 - User ratings: Users receive ratings from auction houses or sellers based on their participation and conduct.
 - Edit profiles: Update user details such as contact information, payment methods, and notification preferences.

- **User Interactions:**

- Users create and manage their profiles, track past auctions, and provide feedback on their experience.
-

6. Watchlist Module

This module allows users to create a personalized list of items they are interested in.

- **Features:**

- Watch items: Users can add auction items to their watchlist for easy tracking and monitoring.
- Track item status: Watchlist shows real-time updates on bid status, time remaining, and current bid amounts.
- Notifications: Get notified about changes in the watchlisted items, including new bids, time left, or auction closures.

- **User Interactions:**

- Users add auction items to their watchlist for future reference and receive updates.
-

7. Reporting Module

This module provides comprehensive reports and insights to auction house administrators and users regarding auction performance.

- **Features:**

- Auction performance reports: Track metrics such as total items auctioned, total sales, bid participation rates, and revenue generated.
- User activity reports: Analyze user engagement, including active bidders, successful bidders, and average bid amounts.
- Financial reports: Generate reports on payments received, refunds processed, and payment statuses.
- Auction house statistics: Provide insights into individual auction house performance, showing revenue, feedback, and user satisfaction.
- Exportable reports: Administrators can export reports in formats like CSV or PDF for further analysis.

- **User Interactions:**

- Admins and auction house managers use reports to track auction performance and make data-driven decisions.
-

8. Auction House Management Module

This module allows auction houses to manage their auctions, items, and user participation.

- **Features:**

- Auction House registration: Auction houses can register and create accounts to host auctions on the platform.

- Auction management: Create, edit, and schedule auctions, manage item listings, and set bidding rules.
 - Vendor performance tracking: Track performance of different vendors and items sold through the auction house.
 - Feedback management: Review feedback and ratings provided by users for auctioned items and the overall auction experience.
 - Financial management: Track payments, generate invoices, and manage commission fees for hosting auctions.
- **User Interactions:**
 - Auction houses manage their auctions, interact with users, and track auction performance.
-

9. Comment System Module

This module allows users to leave comments on auction items and discuss details before placing bids.

- **Features:**
 - Comment on items: Users can post comments or questions on auction items to interact with sellers.
 - Reply system: Sellers or auction houses can respond to user queries or comments.
 - Moderation: Admins can moderate comments to prevent spam or inappropriate content.
 - View history: Users can view all comments related to specific items.
 - **User Interactions:**
 - Users engage with sellers or other users by commenting on auction items.
-

10. Delivery Management Module

This module manages the logistics of delivering won auction items to buyers.

- **Features:**
 - Delivery tracking: Track the status of deliveries, from shipping to delivery confirmation.
 - Courier integration: Integrate with third-party delivery services for shipping items.
 - Delivery status updates: Notify buyers of shipping updates, including estimated delivery dates.
 - Return management: Handle item returns in case of dissatisfaction or defective items.
 - Delivery costs: Calculate and display shipping costs based on user location and item size/weight.
 - **User Interactions:**
 - Users receive and track deliveries for their auctioned items.
-

Summary of Modules:

These modules cover all aspects of the **Online Auction System**, from creating auctions, managing bids, processing payments, and handling deliveries to generating reports and user feedback. This ensures a complete and robust system for both administrators and users participating in auctions.

Detailed workflow

1. User Registration and Profile Management Workflow

- **Step 1:** User visits the registration page.
- **Step 2:** User fills out the registration form (name, email, password, etc.).
- **Step 3:** System validates the input.
- **Step 4:** If valid, the system creates a new user profile and sends a confirmation email.
- **Step 5:** User confirms the email address.
- **Step 6:** User logs in to their account.
- **Step 7:** User can update their profile (contact info, payment methods, etc.).

2. Auction Management Workflow

- **Step 1:** Auction House or Admin logs in.
- **Step 2:** User selects "Create Auction" option.
- **Step 3:** User enters auction details (title, start time, end time, category).
- **Step 4:** User adds auction items (description, starting bid, images).
- **Step 5:** User sets bidding rules (minimum bid increment, reserve price).
- **Step 6:** System saves auction details and schedules the auction.
- **Step 7:** System sends notifications to users about the upcoming auction.

3. Bidding Workflow

- **Step 1:** User browses active auctions.
- **Step 2:** User selects an auction item to bid on.
- **Step 3:** System displays current bid status and bidding rules.
- **Step 4:** User enters their bid amount and confirms the bid.
- **Step 5:** System validates the bid against current bid status.
- **Step 6:** If valid, system updates the bid status and notifies other bidders.
- **Step 7:** User can view their bid history and watchlist.

4. Payment Workflow

- **Step 1:** Auction closes and system identifies the highest bidder.
- **Step 2:** System generates an invoice for the winning bidder.
- **Step 3:** User receives a notification for the payment.
- **Step 4:** User clicks on the payment link in the invoice.
- **Step 5:** User selects payment method and enters payment details.
- **Step 6:** System processes the payment securely.
- **Step 7:** Upon successful payment, the system sends confirmation and updates the order status.
- **Step 8:** If payment fails, the user receives a notification to retry.

5. Notification Workflow

- **Step 1:** System monitors user actions (bidding, auction closures, payment statuses).
- **Step 2:** Based on user preferences, system sends real-time notifications via email or app alerts.
- **Step 3:** Users receive notifications about outbids, auction outcomes, and payment confirmations.
- **Step 4:** Users can configure their notification settings in their profiles.

6. Feedback and Review Workflow

- **Step 1:** Once the auction is completed, the winning bidder receives a prompt to leave feedback.
- **Step 2:** User navigates to the feedback section for the auction item.
- **Step 3:** User fills out a feedback form (rating and comments).
- **Step 4:** System validates the input and saves the feedback.
- **Step 5:** Feedback is displayed publicly on the auction item page for other users to see.

7. Watchlist Management Workflow

- **Step 1:** User browses auction items.
- **Step 2:** User selects an item and chooses the option to add it to their watchlist.
- **Step 3:** System adds the item to the user's watchlist.
- **Step 4:** User can view their watchlist at any time to track item status and bids.
- **Step 5:** System sends notifications if there are updates on watchlisted items (e.g., bids, auction ending soon).

8. Delivery Management Workflow

- **Step 1:** After payment confirmation, system prepares the item for delivery.
- **Step 2:** System generates a delivery order and assigns a courier service.
- **Step 3:** User receives a notification with tracking details.
- **Step 4:** User can track the shipment through a tracking link provided in the notification.
- **Step 5:** Upon delivery, the system updates the order status to "Delivered."
- **Step 6:** User can initiate a return request if needed.

9. Reporting Workflow

- **Step 1:** Admin or auction house manager logs in.
- **Step 2:** User selects the "Reporting" module from the dashboard.
- **Step 3:** User chooses the type of report to generate (auction performance, user activity, financial report).
- **Step 4:** System compiles data based on the selected criteria.
- **Step 5:** User views the generated report on the dashboard or exports it in desired format (CSV, PDF).
- **Step 6:** User can set up scheduled reports to be emailed periodically.

10. Admin Management Workflow

- **Step 1:** Admin logs in to the system.

- **Step 2:** Admin manages user accounts (suspend, activate, delete).
 - **Step 3:** Admin reviews and moderates comments and feedback for appropriateness.
 - **Step 4:** Admin manages auction houses, approving or denying registration requests.
 - **Step 5:** Admin views system analytics and performance metrics for decision-making.
-

Summary of Workflows

These workflows cover all aspects of the **Online Auction System**, ensuring smooth operations from user registration, auction management, bidding, and payments to feedback, delivery management, and reporting. Each workflow addresses the needs of different user roles (e.g., bidders, auction houses, administrators), facilitating an efficient and user-friendly auction experience.
